## DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/19/05 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Jackson (U.S. Pat. No. 5,301,533).

Jackson ('533) shows an embodiment in Figures 11-17 comprising an actuator (202), first (270) and second (276) jaw members, and cam slots (284,296) each having a straight locking portion (294,302) and a curved pivoting portion (288,298). It is pointed out that the jaws pivotally move as cam pin (252) travels through the pivoting portion (288,298), and the jaws remain closed as the pin enters the locking portion (294,302).

4. Claims 7, 10, and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Forster et al. (U.S. Pat. No. 4,886,635).

The patent to Forster et al. shows two pivotable jaws (5,6) each comprising through slots (5a,6a) having angled "locking segments" at each closed end thereof. These angled locking segments, in cooperation with pins (14,15), sleeve (13), support (16), springs (23), flange (17), and rods (21), function to hold the jaw members in either an open or closed position until driven by the piston actuator.
